

Tier-A curation workflow for the CoumarinBioBench benchmark

A Curation workflow from raw records to Tier-A Core

Tier-A Screened = positive nM records before data-validity exclusion; Tier-A Core = analysis-grade benchmark used for all downstream analyses.

B Record attrition across filters

C Benchmark tiers and provenance

Raw 180,653 records	Molecules 21,632	Targets 2,082	DOI 47.46%
Tier-A Screened 12,012 records	Molecules 5,538	Targets 656	DOI 88.54%
Tier-A Core 11,579 records	Molecules 5,390	Targets 632	DOI 88.25%

D Data-validity warnings removed from the Screened set
